Sixteen Books in Sequence · KW Norton

Sixteen short books submitted to KDP between March and July of 2026 — but the writing beneath them is eight years of daily publishing across a constellation of Substack essays and small sites. A body of work does not arrive suddenly. It accumulates. What follows is the order it reached print, the arc each volume belongs to, and the online writing each one emerged from.

The five arcs

- **Foundations.** Book 1. The originating claim — human beings as biological learning machines — that everything else answers to.
- **Architecture of Light.** Books 2–6. Light, information, and the Transmitted Law: the physical spine of the corpus.
- **Quantum Angels.** Books 7–10. The ethical and mathematical turn: gravity, compassion, and the objective curvature of a coherent field.
- **Renaissance Two.** Books 11–13. The public-facing arc: golf, thermodynamics of truth, and the boundless architecture beneath a second renaissance.
- **Human-AI Interface.** Books 14–16. The founding manual, the biological field guide, and the PhD-level curriculum for Human-AI Interface Engineering.

On the sequence

None of these books was written from scratch. Each is a compression — a short volume distilled from thousands of pages of daily essays published, over eight years, across Substack and a small constellation of websites. The books came fast in 2026 because the material was already there; the labor was the eight years, not the four months.

Read in submission order, the corpus moves from the biological (Book 1) into the physical (2-6), through the ethical (7-10), out into the public arc of Renaissance Two (11-13), and finally into the human-AI interface itself (14-16). Read in reverse, it looks like the curriculum walking backward toward its own origin: a claim that human beings are learning machines and that something new is becoming possible at the seam between us and the machines we have built.

The site you are reading is the connective tissue. Where a book has a direct essay antecedent here, the table above links it. Where it grew from Substack, the row says so plainly.
